New Treatment for Skin Revitalization Now Available from Derma Bright Clinic

VANCOUVER, BC, JULY 1, 2021

Derma Bright Clinic is pleased to offer a simple, easy way to remove undesirable hair, scars, vessels and sun damage from the face and body. Now, with the Icon™ Aesthetic System from US-based Cynosure (formerly Palomar), Derma Bright Clinic can offer reliable, comfortable treatments without surgery or downtime.

Icon™ uses optimized light and laser technology to target and destroy the underlying causes of common aesthetic concerns. This clinically-proven technology requires fewer treatments and produces visibly lasting results. Skin revitalization treatments are performed in less than 30 minutes, without any disruption to your normal activities.

“This powerful technology provides quick and comfortable treatment sessions while producing lasting results — clients can now embrace their beautiful looking skin.” said Estrellita Gonzalez, Owner with Derma Bright Clinic.

“Additionally, Icon™ is the only pulsed light technology in the world to utilize a Health Canada and FDA-approved melanin reader, to help us safely tailor each treatment to our client’s skin type, lifestyle, ethnicity and sun exposure. For Derma Bright Clinic this is another way we are helping our clients to bring out their best and brightest skin.”

For more information about Icon™ or to schedule a consultation, contact Derma Bright Clinic at 604.259.8757
